OlyNation

OlyLife THZ Tera-P90 / P90+

This device is the most sensitive among the system line up due to its conductive energy plates and integrated heating system.

Material Breakdown

Energy Plates	Coated conductive metal
Top Housing	ABS plastic
Bottom Housing	Vented plastic
Internal System	PEMF and heating components

The conductive plates are the most critical area and require careful cleaning.

What Can Damage the P90 Plates

- Alcohol (breaks down the conductive coating over time)
- Salt residue from sweat left overnight
- Abrasive cloth materials
- Scratches caused by jewelry
- Standing on the device with wet feet

Daily Cleaning

(After Every Use)

STEP 1 Power Down

- Turn the device off
- Unplug the power cable
- Allow the device to cool for 5–10 minutes

STEP 2 Plate Cleaning

Use a dry microfiber cloth to gently wipe the plates. If sweat is present:

- Use a slightly damp microfiber cloth with clean water only
- Wipe gently
- Immediately dry with a second dry microfiber cloth

Important:
Do not allow moisture to remain on the plates.

Deep Cleaning

(For Heavy Use or Events)

Cleaning Mixture:

- 1 drop neutral pH soap
- 1 cup warm water

Procedure:

- Dip a microfiber cloth in the mixture
- Wring the cloth until almost dry
- Gently wipe the plates
- Immediately dry with a clean microfiber cloth

Never use:

- Alcohol on the plates
- Disinfectant wipes
- Vinegar
- Scrubbing pads
- Paper towels (may cause micro-scratches on the coating)

Weekly Maintenance

- Inspect the plates for dull or uneven patches
- Check the power cord for damage
- Inspect ventilation areas for dust buildup
- Check edges for signs of corrosion

If the plate surface begins to feel rough, stop using the device and inspect it before continuing operation.

Professional Protection Protocol

If the device is used for demonstrations:

- Place a disposable foot liner or tissue under the user's feet
- Wipe the plates immediately after each person
- Do not allow lotion or oil on the feet

Oils degrade conductivity faster than water.
